Input: 1) Absolute file path of the Comma separated adjacency list.

Eg: 'F:/Algorithms/dist.csv'

2) Space separated Cities and algorithm of choice

Eg: Arad Neamt DFS

Output: DFS/BFS/IDDFS path and path cost

Test Cases:

1) Invalid source
2) Invalid destination
3) Distance between two cities
   a. Arad Neamt
   b. Arad Eforie
   c. Oradea Craiova
